Satark

A multilingual AI scam-check companion for older adults.

Help a parent pause before they pay, click, or share.

PAUSE • CHECK • PROTECT

SATARK CHECK / EXAMPLE

“Police say I must pay now or I will be arrested.”

HIGH RISK

Why it looks suspicious

- Claims official authority
- Creates fear and urgency
- Demands money immediately

Next step: Don’t transfer. Hang up and verify through a number you find independently.

TEAM: [Team name] • BUILDERS: [Names] • COLLEGE: [College] • TRACK: [A/B]

TRACK B TEAMS: Add current product URL: [link] | Extension: multilingual scam triage + a consent-based trusted-contact alert.

A scam can win in one moment of panic.

Impersonators use fear, urgency and secrecy to stop people from checking with someone they trust.

24.02 lakh

financial-fraud complaints reported in 2025

₹22,495 cr

reported cyber-fraud losses in 2025

~₹3,000 cr

digital-arrest scam estimate cited to the Supreme Court

THE MOMENT WE SOLVE

A caller posing as police or CBI claims there is a case, orders the person not to disconnect, and demands money to "clear" their name.

Satark creates a calm pause before money moves.

Sources: PIB / Government of India, 2025 NCRP figures • LiveLaw, 3 Nov 2025, report on the ₹3,000 cr estimate

Build for one person first: Ramesh, 68.

A focused persona gives the first version a real situation to solve - and a hypothesis to validate with users.

FIRST-USER PERSONA

R

Ramesh, 68

Retired bank clerk

- Uses WhatsApp and UPI
- Prefers Marathi or Hindi
- His son lives in another city

PERSONA HYPOTHESIS

01

Authority feels real

A video caller uses a badge, case ID and official-sounding language.

02

Fear narrows choices

“Don’t disconnect or tell anyone” makes him rush instead of verify.

03

Help is not beside him

He needs a fast check in his own language before money moves.

Design goal: a clear, calm next step - not a scary score or a long lecture.

One deliberate check. Three clear next steps.

Satark is a user-initiated check - not background phone monitoring or an automatic bank intervention.

01 **CHECK**

Paste a message, upload a screenshot, or share a voice note.

02 **EXPLAIN**

OCR / speech-to-text plus multilingual AI finds warning signs and points to the evidence.

03 **ACT SAFELY**

Show risk and uncertainty, then give simple next steps in the user's language.

SAMPLE RESULT

HIGH RISK

Evidence: fake authority + secrecy + urgent payment request.

Next step: don't transfer money or share OTPs. Hang up and independently verify. Optional family alert only with permission.

Safety by design: never label a message "guaranteed safe"; show why it was flagged and what the user can do next.

Rules catch known scams. AI helps interpret unfamiliar ones.

The advantage is contextual understanding across varied wording, screenshots, and spoken messages - not certainty.

THE SITUATION	RULES / BLOCKLISTS	SATARK + AI
A new scam script	May miss wording that has never been reported.	Looks for context: impersonation, urgency, secrecy and payment pressure.
Marathi voice note or screenshot	A link list alone cannot interpret the full message.	Speech-to-text / OCR extracts content; the model explains the signal in the user's language.
"What should I do now?"	Often gives a generic warning or block decision.	Turns the evidence into calm, tailored next steps the user can follow.

HYBRID BY DESIGN

Combine known indicators with AI context - don't rely on one model answer.

TRUST GUARDRAIL

Show uncertainty, support claims with evidence, and share alerts only with consent.

A demo that proves the core loop - week by week.

Each week ends with a working, testable deliverable rather than just a feature list.

WEEK 1

Text + screenshot triage

Build a web app to paste a message or upload a screenshot. Return a risk level, quoted warning signs, and safe next steps.

DONE WHEN

Run 20 labelled examples; log correct flags and false alarms.

WEEK 2

Marathi / Hindi voice

Add OCR and voice-note transcription. Explain the result in plain language and provide a spoken response.

DONE WHEN

Complete an end-to-end demo from a voice note to a spoken answer.

WEEK 3

Trusted-contact alert + test

Add an opt-in short family alert. Test the flow with older adults using consented, non-sensitive examples.

DONE WHEN

Test with 5 older adults; record comprehension and task completion.

DEMO SUCCESS

A user can see why a message looks risky and choose a safe next step - without entering bank details or sharing anything automatically.
